

Software Appraisal for Cognitive Remediation Therapy (CRT)

This form helps assess and capture which software would be most helpful in a specific cognitive remediation therapy session. It provides valuable input to tailoring treatment to the needs of the client.

Name of software:	
Supplier of software:	
Question/information to be captured	
Description of task/activity/ game:	
Level of reading ability required:	
Any other skills required and level:	
Cognitive deficits addressed by the software:	
How adaptable is the software (how much choice/ control is the client given)?	
What is the multimedia experience like?	

How much input is required by the therapist?	
Overall summary of strengths and weaknesses:	

Appraisal records become increasingly important as more software is acquired for clients with various cognitive deficits from multiple backgrounds.
